*Tunis, Tunisia*

To get good results without a lot of means is what is best.

To be proud of allocating a lot of means is not a good thing.

Also, to aim at a good result should be the rule instead of many rules.

Analyzing the causes of problems allows finding appropriate solutions, so better not to rush to finding solutions without analyzing the causes.

Someone who has experienced the existence of the problems is more able to analyze the causes of the problems than someone else.

A good discussion begins with a discussion of the goals.

Research is not a luxury even in countries which do not have many means for it pulls the society forward.

Adding details to rather well-known phenomena is not very useful.

The economics theories used should be oriented towards the knowledge necessary to achieve some goals.

Results are what posterity is interested in, even partial results.

In the 22nd century, people will be multi-disciplinary One should be interested in uncertainties only for the uncertainties not to remain uncertainties.

Most people are not interested in the truth but only in attracting attention in order to earn more money in the present that is capitalism.

People cannot deny that results are important so they try to claim results which are not real.

Statistics can be not correct on purpose.

Higher educations tend to level up the abilities at the level of countries, but in some countries the abilities are used and in other countries the abilities are not used.

Centralization may have an argument if not many people are competent enough at the regional and local levels but it may certainly not remain like that.

If total quality management is applied to a research, it should not be with too many constraints to let intuition take place.

Beliefs are not as reliable as opinions obtained from meditating.

A criterion for a result being good is that it will be remembered, for what we need to do is to challenge time.

If a country asks for help from another country, it should be aware that the country providing help wishes to have means to know how the help is used.
