

Short communication about qualifications as a need

Adib Ben Jebara

Retired Tunis, Tunisia

Abstract: If public sector employees are not qualified, squandering of public property as an offense is not excluded. Companies do not want to recruit who they see as over-qualified people and that is very regrettable. The problem of divergent requirements of the university and the business or administration can be partially solved by research and development and other problem-solving activities. Ideas which lead to shortcuts to development are not elementary ideas such as invest more or work harder . To follow a procedure does not guarantee a good result and could be using too many means and too much time.

Short communication about qualifications as a need

I. Introduction

From Google search : qualified : officially recognized as being trained to perform a particular job; certified. If public sector employees are not qualified, squandering of public property as an offense is not excluded. Companies do not want to recruit who they see as over-qualified people and that is very regrettable. Universities recruit only very specialized people and that prevent some discoveries to be made.

II. Main text

One has to study laws of Nature not to think of magic as explanation in any case. Qualifications with good judgment mean competence as a supervisor. The studies make it possible in addition to acquiring knowledge to develop the potential to acquire knowledge. However, most people find it difficult to gain knowledge by just reading.

The problem of divergent requirements of the university and the business or administration can be partially solved by research and development and other problem-solving activities. Although it should not be the main goal, studies teach to be active (to succeed). It is when you are trying to improve on a procedure that you need what you have learned and also to shorten the lead times.

Some details in a description are revealing (telling, indicative) while other details are not revealing. It is unfortunate that it is difficult to find revealing details without looking for all the details. For instance, that an email address with domain is provided (as information) is a detail which reveals some level of organization. The existence of a lot of lawyers in an organization does not prevent some member of the organization from doing something dishonest while everybody looking for efficiency is promoting a state of mind propitious to honesty.

Things make complication mandatory only if we do not find a way to simplify. Bureaucracy in the academic world is having a lot of consequences like the lack of content and posterity not interested.

III. Conclusion

People who are in developing countries do not have to stick to elementary ideas because they are in developing countries. Ideas which lead to shortcuts to development are not elementary ideas such as invest more or work harder . To follow a procedure does not guarantee a good result and could be using too many means and too much time.
