

Short Communication about Very Detailed Descriptions Of Some Part of Reality

Adib Ben Jebara

Tunis, Tunisia

ABSTRACT

Someone knowing very detailed descriptions of some part of reality finds it difficult to find even one synthesis of theories.

He/she is like someone physically with some overweight who wants to jump high jump

Theories make us understand and when something is understood, it is understood. It is like riding a bicycle, once it is learned, it is learned.

There are so many descriptions and not that many theories and some descriptions claim to be theories.

The lack of education as cause of many problems is some part of the theory of intellectual activity not important enough because of anti-intellectualism everywhere.

Key words: “Adib Ben Jebara

I. INTRODUCTION

Someone knowing very detailed descriptions of some part of reality finds it difficult to find even one synthesis of theories.

He/she is like someone physically with some overweight who wants to jump high jump.

That is why I am useful.

Besides, I spent years of observing problems and after that years of thinking about the causes of the problems I observed.

Also, I was concerned about whether the problems are well identified or not and about some goals being not good goals.

I was aware that the use of total quality management allows to be not easily criticized.

Theories make us understand and when something is understood, it is understood. It is like riding a bicycle, once it is learned, it is learned.

There are so many descriptions and not that many theories and some descriptions claim to be theories.

II. MAIN TEXT

To clarify the results of a research is also a task which takes time.

The lack of education as cause of many problems is some part of the theory of intellectual activity not important enough because of anti-intellectualism everywhere.

Anti-intellectualism has several ways to show itself.

We are repeated that only campuses have to do research and that researchers do not need any philosophy and that research must rely only on deduction or on collecting data.

PhD dissertation should be for introducing a thesis and not only about what was published recently but people of rich families are the ones who apply for PhD and not people who have a thesis.

III. CONCLUSION

Researchers want to be in a pack of researchers and not to escape from it by criticizing topics from philosophies not relying on the philosophy of a great philosopher.

Such things will be clear with distance in time especially if historians of thinking do well their work.

There is a Marxist theory which says that Marxism will be applied in the periphery of the capitalist center but it is not an important theory because it is about location and nothing is really guaranteed or excluded depending on the intellectual levels.

What should come after capitalism is people more busy with their minds and less busy with their bodies and experts less extremely specialized? That could prevent more climate change.

An example of theory which was missing because of extreme specialization until I wrote it is the following: time is defined by me in cosmology as an infinite set of urelements (non sets) and that has consequences at the level of elementary Particles as two components of time. In Masters Degrees, to introduce two disciplines theories is are not taught.

There is a lack of creativity unlike in some periods of History.
