Abstract: An example of game in the theory of games is as follows : A player has to chose between sending zero message about a research or 15 messages; the outcome in the second case is zero reply with a probability of 99%. The player chose to send 15 messages. The absence of any gain in any case is the bad luck.(definition) It may be because people are extremely specialized, .in our Age or it may be because people do not want to make great efforts or they are already very busy with things which will not pass to posterity.

Key words : “Adib Ben Jebara

I. INTRODUCTION

An example of game in the theory of games is as follows : A player has to chose between sending zero message about a research or 15 messages; the outcome in the second case is zero reply with a probability of 99%. The player chose to send 15 messages. The absence of any gain in any case is the bad luck (definition). It may be because people are extremely specialized, .in our Age or it may be because people do not want to make great efforts or they are already very busy with things which will not pass to posterity. A cause of bad luck is that we surrounded by people who are not up to any task not easy..

II. MAIN TEXT

A restructuring of a public company does not have as consequence a gain of good reputation for the Prime Minister and the Head of the company so it is bad luck. An alternative is an improvement of management of the company by making efficiency a priority.

Climate change is bad luck because it will remain a problem whatever is done. The climate of the planet is not robust. People do what is not in their interest in the long term and even in the middle term.

III. CONCLUSION

That there is no good result with a probability of 99% does not mean that we will wait 99 times before getting a result, it can occur any time before that but it can also not occur. Most often bad luck shows up when it is not expected. Sometimes bad luck does not last long but sometimes there is a series of events with each one showing up bad luck. If we want to consider receiving an email message about anything as e rare event, we would have to acknowledge that there is a different pattern for each day of the week and that is some kind of strong seasonality.
